VANGUARD ETF TO TRANSITION TO CRSP INDEX

TORONTO (June 2, 2013)—Vanguard Investments Canada Inc. announced that Vanguard MSCI U.S. Broad Market Index ETF (CAD-hedged) (VUS) will seek to track the CRSP US Total Market Index (CAD-hedged), effective at the opening of trading at 9:30 a.m. Eastern time on June 3, 2013. As a result, the name of the exchange-traded fund (ETF) will change to Vanguard U.S. Total Market Index ETF (CAD-hedged). The ticker will stay the same.

Vanguard ETF	Ticker	Previous Index	New Index	New Name
Vanguard MSCI U.S. Broad Market Index ETF (CAD-hedged)	VUS	MSCI US Broad Market 100% Hedged to CAD Index	CRSP US Total Market Index (CAD-hedged)	Vanguard U.S. Total Market Index ETF (CAD-hedged)

The CRSP US Total Market Index (CAD-hedged) is a market capitalization-weighted index representing the returns of large-, mid-, small-, and micro-capitalization stocks in the U.S, hedged to the Canadian dollar. It provides similar exposure to the ETF's previous index and will not impact the ETFs' primary investment objectives and strategies. For more information go to [Vanguard's Benchmark Philosophy](#).

CRSP: An index innovator

The index was developed by the Center for Research in Security Prices (CRSP) at the University of Chicago Booth School of Business. In 1960, the research organization pioneered the development of U.S. stock market data that are widely used in academic and investment research.

In 2009, CRSP engaged with Vanguard to create a new series of investable indexes, the CRSP Indexes. Vanguard will be the first investment management firm to track CRSP's broadly diversified benchmarks that cover the broad U.S. market, market capitalization segments and styles.

CRSP's capitalization-weighted methodology introduces the unique concept of "packeting," which cushions the movement of stocks between adjacent indexes and allows holdings to be shared between two indexes of the same family. This approach maximizes style purity while minimizing index turnover.
